

Alberto Morón Hernández

Bristol, UK

(+44) 7702 214970

alberto.moronz@gmail.com

github.com/albertomh

Software engineer with a product and commercial mindset. At ease across the stack and at home in cross-functional teams. Keen on iterative development, DevOps practices and ensuring all disciplines are heard. I achieve consistency through automation to help teams focus on delivery.

<u>Architect</u>	<u>Toolchain</u>	<u>Test</u>	<u>Develop</u>	<u>Deploy</u>	<u>Observe</u>
C4	uv	pytest	Python	Terraform	structlog
structurizr	ruff & mypy	nox / tox	Django	Google Cloud	GCP metrics
mermaid	pre-commit	coverage.py	FastAPI	GitHub Actions	py-spy
	Docker	Playwright	Pydantic	Release Please	django-silk
	Bash		Postgres		Google Analytics

EXPERIENCE

Senior Software Engineer

Sep 2022 – present

University of Cambridge, DevOps division

Cambridge & remote, UK

- Write and peer-review code across the stack: Python (Django, FastAPI), Terraform (Google Cloud), Bash & YAML (Docker, CI/CD), TypeScript (React). Make code modular for reuse by projects & teams.
- Use agents to write code, reduce toil & time-to-deployment, and automate processes. Keep agent output consistent through pre-commit hooks and test suites. Align agents to the business domain via custom skills.
- Collaborate with product managers, user researchers, QA, and engineers on data-driven, cloud-first services. Discover user needs by talking to stakeholders. Use Agile methods to manage scope and priorities.
- Accountable for the performance & stability of Python data pipelines and Django webapps that process X00,000 events per day, serve users across the globe and drive £50m p.a. of tuition fee revenue.
- Build observability into services and use data for impactful changes: both broad (product roadmaps from user analytics) and targeted (performance gains from code profiling, live service alerts).
- Remote-first environment: proven ability for autonomous & asynchronous work, self-discipline and time management. I communicate progress, raise blockers promptly, and help unblock colleagues.
- Use a 'docs as code' approach (structurizr, OpenAPI, mkdocs) to keep documentation accurate with minimal human input and make it useful to colleagues and LLMs alike.
- Collaborate on architecture diagrams (C4) to facilitate discussion, de-risk changes and estimate their cost.
- Create and use dashboards (DORA, GitLab metrics) to inform delivery & strategy conversations.
- Use test-driven development to define expected behaviour and build confidence in agent-led changes. Unit tests (pytest) through to end-to-end (Playwright). Use coverage.py to spot gaps in the test suite.
- Improved query performance for a read-heavy service tenfold. Inspected SQL query plans, refactored Django ORM queries, and used Postgres aggregate functions.
- Co-lead interviews for software engineers. Mentored a junior colleague from frontend to fullstack.

Software Engineer

Apr – Sep 2022

UKRI Young Innovator programme

- Grant to productionise my university research. Launched a SaaS product built on a vector database. Failing to gain traction taught me to deploy frequently, seek user feedback sooner & iterate faster.

Software Engineer

Feb 2019 – Apr 2022

Wealth Club (fintech startup, investment brokerage)

Bristol, UK

- Enabled investment marketplace website to grow 94% YoY and absorb 10x traffic spikes (Wagtail CMS, Django). Used serverless Cloudflare Workers to halve CDN costs and improve SEO scores.
- Resource-constrained startup environment. Learned to wear many hats and understand domain-specific needs across Sales & Marketing teams. Automated manual processes, balancing quality & speed.
- Rapid iteration of in-house CRM, enabling multiple financial products to launch per month.
- Analysed investment and sales data (numpy, pandas, D3.js) to inform commercial decisions.

Junior Developer

Jun 2017 – Feb 2019

Nomensa (UX & development consultancy)

Bristol, UK

- Agency environment: learned to context-switch effectively, talk to stakeholders & fulfil user needs via code.
- Cross-functional team – developers, researchers, designers, QA – building a learning platform for the NHS.
- Used JavaScript Service Workers to enable the webapp to work offline in operating theatres.

OPEN-SOURCE & COMMUNITY

pycliché | djereo

github.com/albertomh/pycliche | github.com/albertomh/djereo

Python & Django project starter templates with a focus on DevX & quality. Automate toil to streamline feature development: standards enforced via pre-commit hooks, reusable pipeline tasks, CI-driven releases.

Reviewer for Adam Johnson's DevX books

EDUCATION

The University of Manchester

2014 – 2017

B.A., Linguistics – First Class Honours

Manchester, UK

Natural Language Processing research into paraphrasing verbal metonymy. Supported by an Amazon Educate grant. Awarded the 2017 Q-Step Prize for best quantitative dissertation. arxiv.org/abs/1709.06162

University of Massachusetts, Amherst

2016

Computational Linguistics (year abroad) – 3.8/4.0 GPA, Dean's List

Massachusetts, USA

King's College School, Madrid

2000 – 2014

IGCSEs & A-Levels

Madrid, Spain

Head Boy | Debate Society | Scholarship for Academic Excellence
